Dear Recruiter,

I am a Front-End Web Developer with strong HTML5, CSS3, Modern JavaScript (ES6+) and ReactJS skills. I published numerous fully responsive websites and web-applications, for different sectors in the industry ranging from association, healthcare, higher-education, government, B2B, and nonprofit sectors. I have strong skills using multiple frameworks and libraries, for both frontend and backend development, as well as the ability to create clear, concise, and reusable code.

I have spent many years perfecting my Front-End Web Development skills which makes me highly proficient at developing attractive and well-structured designs for a wide variety of projects. I love implementing and developing new design features and have been the lead front-end web developer on several occasions, most recently on an exhibition web-application I developed for The National Library of Medicine – Dream Anatomy, which can be found in my Portfolio.

I have a huge respect for your company's philosophy of being creative while supporting ever-changing technologies, and I feel that I can really add a lot of value in the Web Developer role.

Regards,
Mikel Kamel
