PROFESSIONAL SUMMARY

Frontend engineer with 4+ years building enterprise React and TypeScript products — from AI chatbots and schema-driven report engines to high-performance dashboards serving multi-region clients. Bringing a Full-stack perspective, component-system mindset, and a consistent record of shipping work that cuts time, reduces complexity, and scales across platforms.

TECHNICAL SKILLS

- **Frontend:** Next.js, React, TypeScript, JavaScript (ES6+), Redux, HTML5, CSS3, Jest, React Testing Library, TanStack Query, Styled Components, Storybook, WebSockets, Responsive Design, Accessibility (WCAG)
- **Backend:** Node.js, Express, REST APIs, C#, ASP.NET Core
- **Cloud & DevOps:** Microsoft Azure, CI/CD Pipelines, Docker
- **Tools:** Git, GitHub, Figma, VS Code, Agile/Scrum

WORK EXPERIENCE

TÜV SÜD | *Software Engineer (Frontend / Full Stack)*

Dec 2022 - Present

- Cut release cycle overhead by ~35% (3–4 engineering days per cycle) by architecting and shipping SMARTS ReportBuilder — a schema-driven form and report rendering engine that enabled non-technical users to configure and ship templates independently, adopted across 3+ product lines and deployed cross-platform across iOS, Android, and Windows.
- Reduced analyst data retrieval time by 80% (2h → 25m) by leading frontend development of an AI chatbot — designing conversational UI, owning the full UX feedback loop from prompt design to iterative refinement, and integrating JWT-secured APIs for safe execution of model-generated SQL — deployed to 5+ enterprise clients across 3 regions.
- Engineered high-performance data dashboards and workflow UIs handling large-scale enterprise datasets with 10,000+ records, leveraging server-side data processing and advanced caching/prefetching strategies to cut perceived load times by up to 40% and streamline global operations across 12+ countries.
- Reduced per-feature UI development time by ~30% by designing and owning a reusable React/TypeScript component library — including cross-app design tokens and WCAG accessibility compliance — adopted across the frontend team and serving as the foundation for 3+ internal applications.
- Led the migration of 10+ projects from SVN to Git and manual batch-script deployments to Azure DevOps CI/CD pipelines, reducing deployment time by ~70% and eliminating error-prone manual handoffs across the platform.
- Maintained a Jest and React Testing Library suite across shared components and core workflows, catching regressions early across a multi-app codebase.
- Implemented WebSocket-driven real-time updates across inspection flows and mentored junior engineers through code reviews and architecture guidance, raising overall frontend code quality.

Astriata | *Software Engineer (Frontend)*

Nov 2021 - Nov 2022

- Delivered React/TypeScript web applications for healthcare, government, and education clients using Next.js and Azure, owning end-to-end UI development from Figma to production with a focus on performance and accessibility.
- Reduced UI setup time by 30% by building reusable component libraries adopted across 4+ client projects, standardizing WCAG accessibility and performance practices.
- Improved codebase scalability by refactoring legacy UI into modular component architecture, enabling faster feature development and easier cross-team collaboration.

EDUCATION

New Jersey Institute of Technology (NJIT)

2018

Bachelor of Science, Civil Engineering
