## PROFESSIONAL SUMMARY

---

Full Stack Software Engineer with 4+ years building React, TypeScript, C#/.NET, and Azure applications at enterprise scale. Experienced in frontend architecture, scalable backend APIs, AI-powered enterprise workflows, and end-to-end feature ownership across complex data-rich systems. Proven track record improving release velocity, reducing operational friction, and shipping scalable full stack systems end-to-end.

## TECHNICAL SKILLS

---

- **Languages:** C#, TypeScript, JavaScript (ES6+), Python, SQL
- **Frontend:** Next.js, React, Redux, HTML5, CSS3, Jest, React Testing Library, TanStack Query, Styled Components, Storybook, WebSockets, Responsive Design, Accessibility (WCAG)
- **Backend:** .NET, ASP.NET Core Web API, Node.js, Express, FastAPI, JWT Authentication, REST APIs
- **Cloud & DevOps:** Microsoft Azure (App Services, Azure SQL, Azure OpenAI), Azure DevOps, CI/CD Pipelines, Docker
- **Tools:** Git, GitHub, Figma, VS Code, JetBrains Rider, SSMS, Agile/Scrum

## WORK EXPERIENCE

---

### TÜV SÜD

Dec 2022 - Present

*Software Engineer, Full Stack*

- Cut release cycle overhead by ~35% (3–4 engineering days per cycle) by architecting SMARTS ReportBuilder - a schema-driven form and report rendering engine supporting conditional rendering, nested state, and complex validation logic, enabling non-technical stakeholders to configure and ship inspection report templates without engineering involvement, adopted across 3+ product lines and deployed cross-platform across iOS, Android, and Windows.
- Owned end-to-end delivery of SMARTS Central, a scalable React + ASP.NET Core platform supporting multi-step inspection workflows, redesigning data-fetching architecture with TanStack Query (stale-while-revalidate, prefetching, and optimistic updates) to eliminate redundant network waterfalls and reduce perceived load times by 25–40% across critical user journeys.
- Reduced analyst data retrieval time by 80% (from ~2 hours to ~25 minutes per query) by leading frontend development and collaborating on full stack delivery of a production AI chatbot — designing the conversational UI, owning prompt design and iterative UX refinement, and integrating with a Python FastAPI backend and JWT-secured C# APIs for safe execution of model-generated SQL — deployed across 5+ enterprise clients in 3 regions.
- Reduced per-feature development time by ~30% by designing and owning a reusable React/TypeScript component library - including cross-app design tokens and WCAG accessibility compliance - serving as the foundation for 3+ internal applications and standardizing state management architecture using Redux and React Context across a multi-team codebase.
- Migrated 10+ projects from manual batch-script deployments to Azure DevOps CI/CD pipelines, eliminating error-prone manual handoffs and enabling consistent, lower-risk releases across the full platform.
- Maintained a Jest and React Testing Library suite covering shared components and core workflows, catching regressions early across a multi-app codebase.
- Implemented WebSocket-driven real-time updates across inspection workflows and mentored junior engineers through code reviews and architecture guidance, raising overall code quality across shared internal platforms.

### Astriata

Nov 2021 - Nov 2022

*Software Engineer, Frontend / Full Stack*

- Shipped production React/TypeScript web applications for healthcare, government, and education clients using Next.js and Azure App Services, owning full UI delivery from Figma translation to accessible, performant production components.
- Built reusable component libraries adopted across 4+ client projects, reducing new project UI setup time by 30% and establishing consistent WCAG accessibility and performance standards across the org.
- Increased long-term codebase maintainability by refactoring legacy UI into scalable component architecture, collaborating directly with backend engineers and stakeholders to align delivery with business goals.

## EDUCATION

---

**New Jersey Institute of Technology (NJIT)**

*Bachelor of Science, Civil Engineering*

2018
