

MIKEL KAMEL

Somerset, NJ | 609-373-9470 | mikel.kamel.wark@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Full Stack Software Engineer with 4+ years building React, TypeScript, C#/.NET, and Azure applications used by 5,000+ global users. Experienced in frontend architecture, scalable backend APIs, AI-powered enterprise workflows, and end-to-end feature ownership across complex data-rich systems. Proven track record improving release velocity, reducing operational friction, and translating complex technical workflows into scalable product experiences.

TECHNICAL SKILLS

- **Languages:** C#, TypeScript, JavaScript (ES6+), SQL
- **Frontend:** Next.js, React, Redux, TypeScript, HTML5, CSS3, Jest, React Testing Library, TanStack Query, Styled Components, Storybook, WebSockets, Responsive Design, Accessibility (WCAG), Component Libraries, Performance Optimization
- **Backend:** .NET, ASP.NET Core Web API, REST APIs, Node.js, Express, FastAPI, JWT Authentication
- **Desktop / Hybrid:** .NET MAUI, Blazor, Electron
- **Cloud & DevOps:** Microsoft Azure (App Services, Azure SQL, Azure OpenAI), Azure DevOps, CI/CD Pipelines, Docker
- **Tools:** Git, GitHub, Bitbucket, VS Code, JetBrains Rider, Figma, SSMS, NuGet

WORK EXPERIENCE

TÜV SÜD

Dec 2022 - Present

Software Engineer, Full Stack

Building enterprise inspection and compliance platforms serving 5,000+ users across 12+ countries within a 6-person agile team.

- Architected SMARTS ReportBuilder, a schema-driven React rendering engine for dynamic forms and reports without redeployment, eliminating 3–4 engineering days per release cycle and increasing product flexibility for non-technical stakeholders.
- Built and deployed an end-to-end AI chatbot for GRC Connect used across multi-region clients, architecting a FastAPI backend, JWT-secured authentication, and C# APIs for safe execution of model-generated SQL, reducing manual data retrieval time by 80% and improving answer accuracy through continuous feedback-driven optimization.
- Owned end-to-end delivery of SMARTS Central, a scalable React + .NET platform supporting multi-step inspection workflows, optimizing rendering, TanStack Query-powered API data flows, and state orchestration to reduce perceived load times by 25–40% across critical user journeys.
- Designed and scaled a reusable component library and shared state management architecture adopted across 3+ internal applications, reducing per-feature development time by ~30%.
- Engineered schema-driven form workflows supporting conditional rendering, nested state, and complex validation logic - enabling non-technical teams to configure inspection reports without engineering involvement.
- Built and maintained a Jest and React Testing Library test suite covering shared components and core form workflows, catching regressions early across a multi-app codebase.
- Implemented real-time features using WebSockets, enabling live updates across inspection workflows without manual page refresh.
- Owned the migration from manual deployments to Azure DevOps CI/CD pipelines, increasing release reliability and enabling more frequent, lower-risk deployments.
- Partnered cross-functionally with product, design, and backend teams to define API contracts, DTO schemas, and data models powering dynamic enterprise workflows at global scale.
- Mentored junior engineers through code reviews, architecture guidance, and reusable UI design best practices, raising overall code quality across shared internal platforms.

Astriata

Nov 2021 - Nov 2022

Software Engineer, Frontend / Full Stack

- Developed responsive, accessible web applications in React and TypeScript across healthcare, government, and education sector clients.
- Built reusable component libraries adopted across 4+ client projects, reducing new project UI setup time by 30%.
- Translated Figma designs into production-ready React components while consistently meeting accessibility (WCAG) and performance requirements.
- Improved maintainability by refactoring legacy UI code into scalable, component-based frontend architecture.
- Collaborated directly with backend engineers and client stakeholders to ship production features aligned to business requirements.

Freelance

Dec 2020 - Dec 2021

Software Engineer, Frontend / Full Stack

- Built and shipped client-facing web apps including an e-commerce platform using React, Next.js, and Azure App Services, applying component libraries and responsive design; managed code in GitHub and delivered functional products that received positive client feedback.
- Developed Unity3D game projects in C#, independently implementing core gameplay systems and mechanics.

Gladstone Design, Inc.

Sep 2019 - Dec 2020

Design Engineer

- Standardized internal engineering workflows by introducing project checklists, reducing preparation time by ~50%.

- Developed deep domain expertise in engineering workflows and compliance systems - now directly applied to building enterprise software UX for those same users.

Geo-Technology Associates, Inc.

Sep 2018 - Aug 2019

Construction Inspector

- Conducted field inspections and technical evaluations, building firsthand understanding of the engineering user workflows now modeled in enterprise software.

EDUCATION

New Jersey Institute of Technology (NJIT)

2018

Bachelor of Science, Civil Engineering
