Summary

Software Engineer with 4+ years building React, TypeScript, C#/.NET, and Azure applications at enterprise scale. Experienced in frontend architecture, scalable backend APIs, AI-powered enterprise workflows, and end-to-end feature ownership across complex data-rich systems.

Skills

- **Languages:** C#, TypeScript, JavaScript, Python, SQL
- **Frontend:** React, Next.js, Redux, TanStack Query, WebSockets, Styled Components, Storybook, HTML5, CSS3, Responsive Design, Accessibility (WCAG)
- **Backend:** .NET, ASP.NET Core Web API, Node.js, Express, FastAPI, REST APIs, JWT Authentication, MSSQL, NoSQL
- **Cloud & Infrastructure:** Microsoft Azure, Azure OpenAI, Azure DevOps, CI/CD, Docker, Microservices, Distributed Systems
- **Testing:** Jest, Playwright, XUnit, React Testing Library

Experience

Software Engineer

TUV SUD

12/2022 – Current

- Architected and owned an offline-first cross-platform inspection platform (iOS, Android, Windows), reducing release cycle overhead by ~65% — designing a schema-driven form engine that rendered arbitrarily nested sections, editable data grids, and conditional logic from JSON templates, backed by a local SQLite database, background sync, and optimistic concurrency conflict resolution with user-controlled merge for both structured data and binary files. Adopted across 3+ product lines.
- Reduced analyst data retrieval time by 80% (2 hours → 25 minutes) by architecting a production AI chatbot using React and FastAPI, enabling safe automated SQL execution via JWT-secured C# APIs — deployed to 5+ enterprise clients across 3 regions.
- Owned end-to-end delivery of a React + ASP.NET Core platform supporting multi-step inspection workflows —engineering high-performance dashboards and data UIs handling large-scale datasets with 100,000+ records across 12+ countries, leveraging server-side data processing and advanced caching/prefetching strategies to cut perceived load times by up to 40%.
- Reduced per-feature development time by ~30% by designing and owning a reusable React/TypeScript component library – including cross-app design tokens and WCAG accessibility compliance - serving as the foundation for 3+ internal applications and standardizing state management architecture using Redux and React Context across a multi-team codebase.
- Reduced deployment time by 70% and eliminated manual handoff errors by leading the migration of 10+ legacy SVN projects to Git and implementing automated Azure DevOps CI/CD pipelines.
- Mentored 3 junior engineers through weekly code reviews and architectural guidance, resulting in a 20% increase in team velocity and standardized coding practices across 2 internal platforms.

Software Engineer

Astriata

11/2021 - 11/2022

- Delivered 5+ production-grade React/TypeScript applications for healthcare and government sectors, achieving 100% on-time delivery and a 15% increase in user engagement scores.
- Built reusable component libraries adopted across 4+ client projects, reducing new project UI setup time by 30% and establishing consistent WCAG accessibility and performance standards across the org.
- Improved codebase maintainability by refactoring legacy UI into a scalable React component architecture, resulting in a 25% reduction in development time for subsequent feature requests.

Education

Bachelor of Science

New Jersey Institute of Technology

Newark, NJ, USA

08/2014 - 12/2018

- Major in Civil Engineering
